

Junior Polycarbonate

For Metal Roof Systems

Manufactured from UV-stabilized Lexan-grade polycarbonate, the [Sno-Gem Junior snow guard](#) offers a 12.5-sq.-in. bonding surface and is recommended on panels with intermediate ribs. Available in clear or in a color that is injected throughout the material as part of the snow guard. Apply in a non-penetrating fashion using a 3M VHB Tape or use tube adhesive. Optional mechanical fastening.

Manufactured from UV stabilized polycarbonate, the unique design of these crystal-like guards suspends the field of snow until the snow and ice gradually melt under the sun's rays.

CUT: Sno-Gem snow guards prismatic design was developed by architectural sheet metal professionals with over 50 years of on-the-roof experience.

CLARITY: Sno-Gem offers a clear prismatic snow guard which retains its crisp, clean good looks. There's no metal to rust or stain. Sno-Gem snow guards are unaffected by climate extremes.

COLOR: Sno-Gem snow guards can be matched to all industry standard metal roof colors. Sno-Gem also offers an unlimited amount of custom colors to meet architectural requirements. The color is injected throughout the material.

CARAT: The true measure of a gem's worth. At the heart of each Sno-Gem is an engineered, multi-directional, multipurpose drain opening for melting snow and ice to flow freely, plus cables can be easily routed through the opening.
