

## Membrane-Coated Diamond Series System™

For TPO Membrane Roof Systems

TPO Coated and Pre-Skirted Base Plates Shown

TPO-Coated Bracket

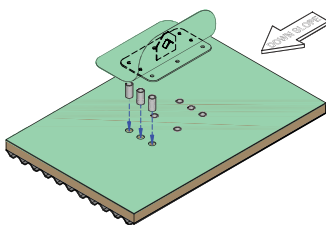

### Overview

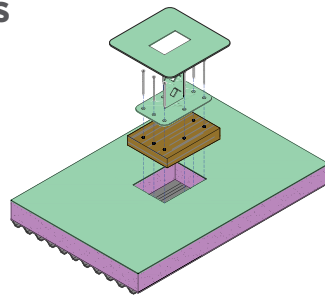

Sno Gem's® TPO-Coated Diamond Series System™ is the roofing industry's first-ever factory applied membrane-coated continuous bar snow retention system for new construction or retrofit applications. The stainless steel base plates/brackets are pre-dipped and available in standard TPO colors to match virtually every manufacturer's roofing membrane. For ease of installation, Sno Gem's® patent-pending Membrane-Coated Diamond Series System™ is now available with a factory applied pre-skirted target patch that is heat welded directly to the TPO-coated base plate. To install, simply heat weld Sno Gem's® target patch directly to the membrane of the roof. This process reduces labor cost and ensures the system stays water-tight, which is imperative to keep from voiding your roof's warranty\*.

With all Sno Gem® Deck Mount Systems, options include a 1, 2, or 3 bar and either 1" or 2" size bars in square or round tubing. The Barricade Plate® is a recommended accessory to reduce melting snow and ice from sliding underneath the bar. For additional details, technical questions, or to get an estimate, visit [snogem.com](http://snogem.com) or call 888-SNO-GEMS.

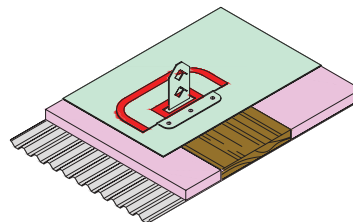

### Installation Options

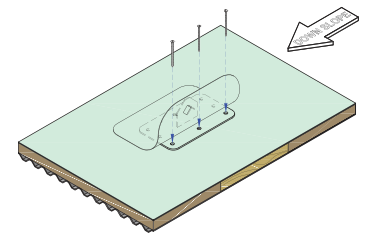

Ferrule Retrofit Option

Wood Blocking Retrofit Option

TPO-Coated Base Plate New Construction Option

Pre-Skirted Target Patch New Construction Option
